ATM SENTRY

NS-30VR

Designed to deliver multiple security functions in a discreet form factor, Night Sabre ATM Sentry protects sensitive assets without being obtrusive.

- Digital PIR sensor will reliably detect movement at night within a controlled zone

- Integrated day/night overview camera adapts intelligently to conditions

- Flashing blue LEDs strobe when alarm is triggered

- Integrated Infra-Red supports camera quality at night

- White LED floodlight illuminates immediate area and allows colour images at night

- Energy efficient with 25,000 hours LED lifetime

The white light will only operate at night as someone approaches the area immediately in front of the unit and will turn on gradually. If the alarm input is triggered then the white light is disabled to maximise the effect of the blue strobe, a deterrent and clear indication of incident location.
The integrated camera provides a colour observation view during the day or when the light is on, giving an ideal perspective angled down to the target at 45°. At night clear monochrome images are supported by the IR LEDs. A version without the IR LEDs and camera is also available – NS-30VR

ATM SENTRY

|	NS-30VRC – With Camera	NS-30VR – Without Camera
White Light	900 Lumens @ 4000k with soft start	900 Lumens @ 4000k with soft start
Infra Red Light	840nm	NA
Power	12vDC 12w	12vDC 9w
Dimensions	385x30x30mm	385x30x30mm
Alarm	Momentary alarm input to trigger blue strobe	Momentary alarm input to trigger blue strobe
Detection	4-5m Digital PIR 45° H detection zone	4-5m Digital PIR 45° H detection zone
Camera	700TVL day/night camera 0.01lux	NA
Lens	2.5mm with IR cut filter F2.0	NA
Weatherproof	IP-65	IP-65
Vandal Rating	IK7 with security retaining screws	IK7 with security retaining screws
Construction	Aluminium alloy & ABS	Aluminium alloy & ABS
Mounting	2.5-4m high to wall/ceiling/overhang	2.5-4m high to wall/ceiling/overhang

Colour Camera
During daylight hours the camera provides wide angle, overview surveillance with high resolution colour images for recording onto a CCTV system

Security Light
If a person approaches the protected area at night the white LED turns on and the camera reverts to colour mode. The illumination provides additional comfort to an ATM user at night and will turn off 60 seconds after they leave the area.

Alarm Strobe
If an alarm is triggered – such as ATM attack the flashing blue LEDs strobe to alert law enforcement and create an effective deterrence. The white light turns off to reduce vision and IR turns back on to give crisp video of the alarm event – unaffected by the strobe

Infra Red Camera
At night the integrated IR LEDs turns on and the camera switches to monochrome mode. Linear Infra Red LEDs give an even illumination over a wide area without "hot spots"
